

# KENTUCKY RECYCLING & MARKETING ASSISTANCE PROGRAM

## MARKET OPPORTUNITIES

**A current listing of markets for recyclable commodities recovered in  
the Commonwealth of Kentucky**

Division of Waste  
Management

Energy and Environment Cabinet

## **ABOUT MARKET OPPORTUNITIES**

Market Opportunities is a current listing of state, regional, and national brokers, processors and end-users that conduct business with Kentucky's recycling industry. This information is collected by the Kentucky Recycling Market Assistance (KRMA) Program, which is dedicated to providing the most accurate information to help recyclers get the best market value for their recovered commodities.

Market Opportunities lists markets for tractor-trailer load lots of materials most commonly recovered by recycling programs. Typical processing specifications for truck lot marketing are included, however, the buyer and seller should negotiate specific quality standards as well as shipping arrangements.

Pricing for many of the commodities listed can be found in the KRMA monthly publication, The Marketplace, available online at [www.recycle.ky.gov](http://www.recycle.ky.gov).

## **COMBINED LOADS**

Some buyers purchase combined loads of more than one type of paper, plastic or metal. Some buy combined loads of ALL types of recyclables. Buyers of combined loads are indicated by an asterisk (\*).

Buyers may need higher value items (such as sorted office paper and aluminum cans) in the mix in order to be able to afford to take lower value items (such as plastics and glass.)

This directory is for information only. It is neither an endorsement nor an offer to purchase. The Kentucky Division of Waste Management assumes no responsibility for sales or purchases.

This publication is printed with state funds on recycled paper and is available in alternative formats to persons with disabilities by contacting The Kentucky Recycling & Marketing Assistance (KRMA) Program, Division of Waste Management, RCLA Branch, 14 Reilly Road, Frankfort, Kentucky, 40601, Phone: (502) 564-6716.

## **CORRUGATED CONTAINERS**

Old Corrugated Containers (OCC) consists of boxes with a “fluted” corrugated medium sandwiched between layers of linerboard and is readily marketed in trailer load lots. Typically, OCC must be baled, minimum load weights are required and wax-coated material is prohibited. The buyer and seller should negotiate quality standards and baling specifications. Refer to the Institute of Scrap Recycling Industries’ (ISRI) Paper Stock Specifications (11) and (12).

Pricing may be indexed to the Official Board Market’s Yellow Sheet quotation for the Chicago area. The Marketplace also provides an indication of the value of corrugated containers.

## NEWSPAPER

Old newspapers (ONP) are readily marketed in trailer load lots. Typically, ONP must be clean and dry, bundled free of strapping and headers, and not sunburned. Minimum load weights are usually required and purchaser pays freight. The buyer and seller should negotiate quality standards and baling specifications. Refer to the Institute of Scrap Recycling Industries' (ISRI) Paper Stock Specifications (6) and (8).

Pricing may be indexed to the Official Board Market's Yellow Sheet quotation for the Chicago area. The Marketplace also provides an indication of the value of newspaper.

## SORTED OFFICE PAPER

Sorted Office Paper (SOP) is readily marketed in trailer load lots. It consists primarily of ground wood-free white ledger, colored ledger, computer paper, xerographic paper and carbonless paper (NCR). It may include a small percentage of ground wood computer printout and facsimile paper. Typically, SOP must be dry. Minimum load weights are required and purchaser pays the freight. Some markets accept loose material. The buyer and seller should negotiate quality standards and baling specifications. Refer to the Institute of Scrap Recycling Industries' (ISRI) Paper Stock Specification (37).

The Marketplace provides an indication of the value of SOP.

## PETE PLASTICS

Polyethylene Terephthalate (PET) resin is used to make plastic soft drink bottles and food containers. It can be identified by the Society of Plastics Industries' identification code (#1) found on the bottom of the containers. Some buyers accept beverage bottles only. Typically, PET must be rinsed and drained to remove residue and other contaminants. It must be stored under a UV protective cover. Some buyers may require removal of caps, cap rings and labels. The buyer and seller should negotiate quality standards and baling requirements. Refer to the Institute of Scrap Recycling Industries' (ISRI) Guidelines for Plastic Scrap Codes P-100 through P-110.

The Marketplace provides an indication of the value of PETE.

## HDPE PLASTIC

High-Density Polyethylene (HDPE) resin is commonly used in its natural form to make milk and water containers, and in its pigmented form to make detergent containers. The Society of Plastics Industries' identification code (#2) can be found on the bottom of the containers. Some buyers accept natural HDPE only. Typically, HDPE must be rinsed and drained to remove residues, dirt and other contaminants, and stored under a UV protective cover. Some buyers may require removal of caps, cap rings and labels. The buyer and seller should negotiate quality standards and baling requirements. Refer to the Institute of Scrap Recycling Industries' (ISRI) Guidelines for Plastic Scrap Codes P-200 through P-202.

The Marketplace provides an indication of the value of HDPE.

## POST-INDUSTRIAL PLASTICS

This class of plastic resins is produced primarily as a waste product of plastics manufacturers. They have been recovered or diverted from the waste stream and not from the post consumer recycling stream. Most cannot be reused within the original manufacturer's process. They may consist of both injection and blow molded materials, rigid or flexible in form, and can be any of the SPI Codes 1 thru 7. Many fall within the #7 OTHER category (i.e. Nylon, ABS, AAS, Polycarbonate, Acrylic and etc). As with other plastics, it must be clean and dry, and protected from UV damage. The exact resin must be determined in order to market the materials. The best source of this information is from the manufacturer. Usually, the buyer will want a sample of 2 lbs. minimum to ensure that the material is suitable for their use. The buyer and seller should negotiate quality, packaging (i.e., baled or in Gaylord boxes) and transportation responsibility before shipping. Refer to the ISRI Guidelines for Plastic Scrap General Information page for further information.

Container glass can be recycled an infinite number of times and is the most versatile food container material. Seventy percent of glass containers in the U.S. are clear (or "flint") and the balance classified as brown (or "amber"), green and blue. Color separation is a major quality control issue. Glass can be marketed whole or crushed and some breakage is permitted. It is typically shipped in Gaylord boxes although the buyer sometimes provides steel containers. Containers must not be so heavy they cannot be lifted by a hand-operated pallet jack. Unlike most commodities, the shipper generally pays freight. Typically, all lids, caps and neckrings must be removed and containers rinsed and drained to remove residues, dirt, and other contaminants. Labels may sometimes remain intact. Cullet should be stored on a concrete pad to avoid contamination with dirt or gravel, and be covered during wet weather. Non-container glass (such as window glass, Pyrex, light bulbs, electronic tubes, ceramics, and drinking glasses) is unacceptable and considered a very serious contaminant. Refer to the Institute of Scrap Recycling Industries (ISRI) guidelines for container glass cullet. The buyer and seller should negotiate specific requirements.

Mixed load buyers (marked with an asterisk under the other commodities) will accept glass along with other commodities but may not accept it by itself due to its lower value.

The Marketplace provides an indication of the value of glass.

## ALUMINUM

Aluminum cans (referred to as Used Beverage Cans or "UBC") are readily marketed in trailer load lots. UBC can be sold in densified biscuits, briquettes, bales, flattened or shredded. UBC must be magnetically separated from bi-metal and tin cans and free of steel, lead, plastics and other foreign substances. Other aluminum items cannot be mixed with UBC. UBC pull-tabs are not marketable as an item by themselves. The buyer and seller should negotiate quality standards and baling requirements. Refer to the Institute of Scrap Recycling Industries' (ISRI) Guidelines for Nonferrous Scrap -- code words Talcred, Taldeck, Taldon and Taldork.

Pricing may be indexed to the London Metal Exchange. The Marketplace also provides an indicator of the value of UBC.

## STEEL CANS

The steel can is often referred to as a "tin can" because some steel cans are coated with a thin layer of tin to prevent rust and protect the contents of the can. Steel food and beverage cans should be rinsed prior to recycling. Paint cans should be air-dried with only a thin layer of dry paint remaining in the can and the lid removed to allow for visual inspection. Lids should be collected and baled with the steel cans. Aerosol cans should be emptied through normal use. Plastic spray nozzles and labels from any steel cans do not need to be removed for recycling. All steel cans (food, beverage, paint and aerosol), along with steel caps and closures can be baled together for shipment. Refer to the Institute of Scrap Recycling Industries' (ISRI) Guidelines for Ferrous Scrap, code number 213.

Mixed-load buyers (marked with an asterisk under the other commodities) may accept steel cans along with other commodities but may not accept them by themselves.

The Marketplace provides an indicator of the value of steel cans.

### **NEED MORE HELP?**

We hope Market Opportunities has helped you find the best market for your commodities. To further enhance your marketability, partnering or regionalizing with nearby recycling programs has several advantages, and is typically the natural progression of highly successful recycling programs. These recycling partnerships will often increase the number of competitive markets within your range and create synergy between communities that may benefit all. The KRMA Program is experienced in providing guidance and information on how to successfully develop these partnerships. Best of all, our onsite consultation and marketing assistance is free. To learn more about our services and how we can help you get more out of your program, browse our website at [www.recycle.ky.gov](http://www.recycle.ky.gov) or contact us at:
